

**Professor Steven Kemp (BSc (Hons). D Clin Psychol. PG Diploma. AFBPsS)
Consultant Clinical Neuropsychologist**

The
British
Psychological
Society

Chartered Psychologist

MEWI
7393

Qualifications and experience:

I am Professor Steven Kemp; I hold the degree of Bachelor of Science (Psychology - First Class) awarded from the University of Hull and the degree of Doctor of Clinical Psychology awarded from the University of Leeds. I am registered with the British Psychological Society (BPS) as a Chartered Clinical Psychologist (C. Psychol). I have completed a Post Doctoral Diploma in Clinical Neuropsychology at the Maudsley Hospital, King's College, University of London. I hold practitioner full-membership of the Division of Neuropsychology of the British Psychological Society. I am a Visiting Professor at Leeds Beckett University, School of Social Sciences. I am registered with the Health and Care Professions Council (HCPC). I am an Associate Fellow of the British Psychological Society.

In my NHS practice, I have held the position of Consultant Clinical Neuropsychologist and head of the community brain injury rehabilitation team in Leeds. I have held the position of Consultant Clinical Neuropsychologist and joint head of the neuropsychology service at St. James' University Hospital, Leeds. I am currently an Honorary Consultant Clinical Neuropsychologist with Leeds Teaching Hospitals NHS Trust. I specialize in the assessment and treatment of brain injured patients and neurology patients. This involves understanding the neurocognitive, neurobehavioral and psychological / social impact of brain injury and neurological disease. I routinely see brain injured patients and neurology patients for neuropsychological assessments in order to determine the effects of injury on cognitive functioning (e.g. memory and concentration), personality and behaviour and provide treatment and rehabilitation. I also see patients to assess and treat the psychological effects of injury or illness. For example, post-traumatic stress disorder (PTSD), anxiety, depression or psychological symptoms that can result from traumatic experiences or neurological illness.

I have a special clinical and research interest in - traumatic brain injury, memory disorders, performance validity tests (PVTs) and symptom validity tests (SVTs), the neuropsychology of epilepsy, neuropsychological rehabilitation, dementia and the aetiology and psychological treatment of medically unexplained symptoms (MUS) / functional neurological disorder (FND) / functional cognitive disorder (FCD).

I have over twenty years' experience in the field of Clinical Neuropsychology and I am the author of several recent publications. I am cited in the British Psychological Society (BPS) Directory of Chartered Clinical Psychologists and the BPS Directory of Expert Witnesses. I am listed on the BPS Specialist Register in Clinical Neuropsychology. I am a member of the Expert Witness Institute (EWI).
